Figueira Decl. Tab

51

would you be able to populate the live DB but "wire-off" matches for Sony and Universal ?

because i'm thinking another strategy would be to populate the DB with Warner+Sony+Universal.
At launch, return matches only on Warner content.
Then at somepoint in time wire-on Universal content, then Sony.

no, please for now include only Warner catalog

we will request you to add Universal and then Sony catalog later on (i anticipate
sometime towards end of november).
how much notice would you need to add each of those catalogs to your fingerprint
DB ?

Thanks,
Franck

The database has 500k songs in it, but I don't know exactly which ones are in
it. We need to generate a Warner specific database for you.
BTW, do you want us to include any other labels in the database now?

Hi Jim,

yes, i was testing yesterday and figured the new appname had not
been setup yet.
no problem, i'm using the old appname YouTube

i also noticed the DB is probably empty ?
I did not get any match returned on my testing of about 100 videos.

Thanks
Franck

Hi Franck,

Our systems reported that someone sent an IDRequest
with the appname of YouTubeAMYT and we denied it. I
assume this was you testing the new setup. We have now
enabled the three new appnames. They still all go to the
one new server with the smaller database.

I've been talking with Lou today and he's made a lot of
progress on the encoding string issue and Beyonc?. I think
he is close to an answer that will work for everyone.
